SGN Online Global Forum - ISO 26000 in a world of turbulence and uncertainty (updated on May 25, 2026)

Online Global Forum hosted by ISO 26000 SGN

Date & time: Wednesday, June 17, 2026 at 19:00 Singapore time

Topic: ISO 26000 in a world of turbulence and uncertainty

Goals:

1. to advocate for ISO 26000 and its core principles;
2. to explore ways ISO 26000 is actually being used;
3. to encourage discussion among different stakeholder groups of ways to promote ISO 26000 through training programs, events and outreach.

Expected Outcomes: This Online Global Forum should provide participants with specific information about how and why ISO 26000 is being used, which they can apply to their own organizations. It should encourage newcomers to get started and deepen the commitment of those already using ISO 26000. Participating in a group dedicated to social responsibility provides networking opportunities and a supportive framework for people and organizations seeking guidance in today's world of turbulence and uncertainty.

Target Audience: Policymakers, private sector, NGOs, labor organizations, standards bodies, academics and general public who wish to gain an understanding of the topic.

Platform: Over Zoom

Register in advance for this meeting:
